

← course home (/table-of-contents#section_array-and-string-manipulation_question_reverse-string-in-place)

Write a function that takes a list of characters and reverses the letters in place.↴

Why a list of characters instead of a string?

The goal of this question is to practice manipulating strings *in place*. Since we're modifying the input, we need a mutable type like a list, instead of Python 2.7's *immutable* strings.
