Interview Cake

Write a function to see if a binary tree is *"superbalanced"* (a new tree property we just made up).

A tree is "superbalanced" if the difference between the depths of any two leaf nodes is no greater than one.

Here's a sample binary tree node class:

Python 2.7 ▾

```python
class BinaryTreeNode(object):

    def __init__(self, value):
        self.value = value
        self.left  = None
        self.right = None

    def insert_left(self, value):
        self.left = BinaryTreeNode(value)
        return self.left

    def insert_right(self, value):
        self.right = BinaryTreeNode(value)
        return self.right
```
